Andreas Bollin received his Ph.D. and Venia Docendi from the University of Klagenfurt where he is currently active as Associate Professor at the Software Engineering Research Group. His research interests are project management and software engineering (with a focus on reverse engineering and formal methods). He is also active in the area of e-learning and new technologies to enhance various aspects of teaching computer science.

Elke Hochmüller is Professor of Informatics at the Carinthia University of Applied Sciences in Klagenfurt, Austria. She received her Ph.D. from the University of Vienna and the Venia Docendi from the University of Klagenfurt, respectively. Her teaching and research activities focus on various software engineering topics, like requirements engineering, software development processes, and software engineering education. As an experienced requirements engineering professional she has been teaching courses on requirements engineering at several European universities for more than 20 years. She is member of the ACM.

Csaba Szabó received his PhD. from the Technical University of Košice, where he is currently active as an Assistant Professor, teaching topics related to software engineering. His research interests include behavioral description of software, autonomous computing, and software and test evolution. He is also active in introducing computer simulations and virtual reality into the education process.

Veronika Szabóová graduated (MSc.) in the field of Informatics at the Dept. of Computers and Informatics of the Fac. of Electrical Engineering and Informatics (FEIaI) at Technical University of Košice in 2012. Currently she is a PhD. student in the field of Informatics at the FEIaI at Technical University of Košice. Her research is focused on behavioral description of internal processes of information systems, autonomous computing, requirements engineering and software maintenance.
• This book is the result of implementation of the research and development cooperation project No. SK-AT-0024-12: "Advanced Software Engineering Education – Methods and Tools (AdSEE)."

• Publishing of this book was also supported by the Cultural and Educational Grant Agency of the Slovak Republic under project No. 019TUKE-4/2014: "Integration of the Basic Theories of Software Engineering into Courses for Informatics Master Study Programmes at Technical Universities – Proposal and Implementation."

## Contents

1 **Introduction** ..................................... 1  
   1.1 Motivation ........................................ 2  
   1.2 Definitions ...................................... 5  
   1.3 Processes ........................................ 14  
   1.4 The Art of Requirements-Documentation ........ 15  
   1.5 Pros and Cons .................................... 19  
   Bibliography for Chapter 1 .......................... 24  

2 **Semi-formal notations** ......................... 27  
   2.1 Structured text ................................... 31  
   2.2 Visual requirement representation ............. 38  
   2.3 V&V Tool Support ................................ 46  
   Bibliography for Chapter 2 .......................... 52  

3 **Formal notations** .............................. 54  
   3.1 The Use of Formal Specifications ............... 55  
   3.2 Tools and Applications ........................... 92  
   Bibliography for Chapter 3 .......................... 105  

4 **Skills in requirements engineering** .......... 110  
   4.1 Communication problems ......................... 111  
   4.2 Requirements engineering skills ............... 112  
   4.3 Best practices in requirements elicitation ... 116  
   4.4 Soft skills ....................................... 134  
   Bibliography for Chapter 4 .......................... 142  

5 **Summary** ........................................ 144
